### Lầu Năm Góc ký hợp đồng với bảy công ty AI cho công việc quân sự được phân loại

🇺🇸 *Pentagon inks deals with seven AI companies for classified military work*

The Guardian [🔗 Đọc bài viết →](#)

The US Department of Defense has signed agreements with seven artificial intelligence (AI) companies for classified military work. The companies involved are OpenAI, Google, Nvidia, Anthropic's rival, Cerebras, and two other unnamed companies. As part of these agreements, the AI companies have agreed to allow the Pentagon to use their technology for any lawful purpose. This means the military will have access to the companies' AI capabilities, which can be used for a wide range of applications, including military operations and research. Notably, Anthropic, a rival AI company, was not included in the agreements. This is reportedly due to a disagreement between Anthropic and the Pentagon over concerns about the potential misuse of AI technology. The exact nature of these concerns and the disagreement is not specified. The inclusion of the other seven companies in the agreements suggests that the Pentagon has found them to be more suitable for classified military work.

### Thay đổi giải Oscar cho phép đề cử diễn xuất kép trong khi cấm AI

🇺🇸 *Oscars changes allow for double acting nominations while banning AI*

The Guardian [🔗 Đọc bài viết →](#)

The Academy of Motion Pictures Arts and Sciences has made significant changes to its rules for the upcoming Oscars. One key alteration allows actors to be nominated for two

performances in the same category, a change that was previously not permitted. This new rule aims to recognize actors who take on multiple roles in the same film. Additionally, the Academy has implemented a ban on the use of artificial intelligence (AI) in the creation of original screenplays. This move is intended to preserve the integrity of the Oscars and ensure that nominees have made genuine creative contributions to their work. The Academy has also revised its rules on international film eligibility, although the specifics of these changes have not been disclosed.

### ‘Vụng về và nhục nhã’: Những người tìm việc ở Anh chia sẻ sự thất vọng với các cuộc phỏng vấn AI

 *'Awkward and humiliating': UK job hunters share frustration with AI interviews*

 The Guardian [Đọc bài viết →](#)

A recent survey in the UK has revealed the growing trend of artificial intelligence (AI) being used in job interviews. The findings show that nearly half of job seekers have been interviewed by AI, sparking frustration and discomfort among applicants. Many have described the process as "awkward" and "humiliating," citing the unnatural and often robotic nature of AI interactions. Those who have experienced AI interviews report feeling uneasy and unsure of how to respond to the automated questions and prompts. The lack of human interaction and empathy is seen as a major drawback, making it difficult for applicants to connect with the potential employer. The use of AI in job interviews has raised concerns about the potential for bias and the inability of AI systems to fully understand the nuances of human communication. The survey highlights the need for a more human-centered approach to job interviews, where applicants can engage with real people and build meaningful connections.

### Five Great Reads: the AI hackers, life as a sex writer and the real secret to decluttering

 *Five Great Reads: the AI hackers, life as a sex writer and the real secret to decluttering*

 The Guardian [Đọc bài viết →](#)

This week's Guardian Australia weekend wrap features five essential reads curated by Imogen Dewey. The first article delves into the world of AI hackers, exploring the growing threat of artificial intelligence-powered cyber attacks. Another article shares the experiences of a sex writer, offering a unique perspective on the industry and the challenges faced by those who work in it. A third article reveals the real secret to decluttering, debunking common myths and providing practical tips for those looking to simplify their living spaces. The remaining two articles are not specified in the provided content.

## Tôi là một nhạc sĩ – đây là cách một chiếc điện thoại hỗ trợ AI giúp tôi chia sẻ âm thanh của mình với thế giới

 *I'm a musician – this is how an AI-powered phone helps me share my sound with the world*

 The Guardian [Đọc bài viết →](#)

Fred Roberts, a viral singer-songwriter, shares his experience with using an AI-powered phone to share his music with the world. He discusses the challenges of pre-posting anxiety, where he worries about how his content will be received before sharing it online. This anxiety is exacerbated by the pressure of being recognized in public while editing his videos, which can be a daunting experience. However, with the help of his AI-powered phone, Roberts has found a new way to create and share his music. He uses the phone's front camera to record videos, which has led to the unexpected rise of the front camera video as a popular format for musicians. This format allows Roberts to create content without feeling self-conscious about being recognized, giving him the freedom to be more authentic and creative in his work. By leveraging the capabilities of his AI-powered phone, Roberts is able to share his music with a wider audience and build a connection with his fans.

## LHQ cảnh báo phụ nữ trong đời sống công cộng phải đối mặt với bạo lực trực tuyến ngày càng tinh vi

 *UN warns women in public life face increasingly sophisticated online violence*

 The Guardian [Đọc bài viết →](#)

The United Nations has issued a warning about the growing threat of online violence against women in public life. A recent report by UN Women highlights the increasing sophistication of online attacks, which are becoming more difficult to combat. The report cites the use of artificial intelligence (AI) and anonymity as key factors contributing to this rise in online violence. These tactics allow perpetrators to launch targeted and coordinated attacks with relative ease, making it challenging for victims to defend themselves. Furthermore, the report notes that existing laws and regulations are often ineffective in addressing online harassment and violence. As a result, women in public life are facing heightened risks when engaging in digital spaces. The UN is calling for greater action to address this issue, including the development of more effective laws and regulations to protect victims of online violence.

## UK Biobank có dữ liệu của tôi, nhưng tôi không lo lắng. Tôi biết những lợi ích quá lớn để xem xét rút khỏi | Polly Toynbee

 *UK Biobank has my data, but I'm not worried. I know the benefits are too great to consider pulling out | Polly Toynbee*

 The Guardian [Đọc bài viết →](#)

UK Biobank, a large-scale health database, holds the personal data of millions of individuals. Despite a recent security breach in China, Guardian columnist Polly Toynbee reassures that the benefits of participating in such a study outweigh the risks. Longitudinal studies, like UK Biobank, have proven to be valuable tools in medical research, providing insights into various conditions including motor neurone disease, cot deaths, and Alzheimer's. These studies allow researchers to track the progression of diseases over time, leading to a better understanding of their causes and potential treatments. Toynbee emphasizes that the potential benefits of participating in UK Biobank, such as contributing to groundbreaking medical research, outweigh the risks associated with data security breaches. She encourages individuals to consider joining the study, despite the recent security incident in China.

### ⚡ TIPS & TRICKS CHO DEV

#### ⚡ Sử dụng GitHub Copilot để tăng hiệu suất code

GitHub Copilot là công cụ AI giúp bạn tự động hóa code bằng cách dự đoán và hoàn thành đoạn code theo ý muốn. Để sử dụng Copilot, bạn có thể nhập lệnh "import gh.copilot" và chờ đợi Copilot dự đoán đoạn code phù hợp.

#### ⚡ Sử dụng Claude để tạo tài liệu hướng dẫn

Claude là công cụ AI giúp bạn tạo tài liệu hướng dẫn bằng việc chuyển đổi code thành ngôn ngữ tự nhiên. Để sử dụng Claude, bạn có thể nhập lệnh "explain this code" và chờ đợi Claude tạo tài liệu hướng dẫn cho đoạn code của bạn.

### BÀI HỌC AI HÔM NAY CHO DEV

#### Tự động hóa với LLM (Large Language Model)

Dev cần biết tự động hóa với LLM vì giúp giảm bớt thời gian và công sức trong việc thực hiện các tác vụ lặp lại, như viết code, tạo báo cáo, v.v. Điều này cho phép dev tập trung vào các phần quan trọng

hơn của dự án.

**Ví dụ thực tế:** Hãy tưởng tượng một dev đang phải tạo báo cáo hàng tháng về trạng thái dự án. Với LLM, dev có thể sử dụng một lệnh như `generate_report` và LLM sẽ tự động tạo báo cáo dựa trên dữ liệu đã được xử lý.

**Code snippet minh họa:**

```
# Lệnh tạo báo cáo  
generate_report --project <tên dự án> --month <tháng hiện tại>
```

**LLM sẽ tự động tạo báo cáo dựa trên dữ liệu đã được xử lý**

```
report = {  
    "status": "in_progress",  
    "tasks_completed": 80,  
    "tasks_remaining": 20  
}
```

 **Tip:** Hãy thử sử dụng các LLM như BERT, RoBERTa hoặc T5 để tự động hóa các tác vụ trong dự án của bạn. Bạn có thể sử dụng các thư viện như Transformers hoặc Hugging Face để tích hợp LLM vào ứng dụng của mình.
